FANTASY LIGHTS GROUP[®]
COMPLETE LIGHTING SOLUTIONS
Est. 1989

About

Fantasy Lights have been in the business of Festival and Christmas Lighting for more than 35 years. We are leaders and innovators in the decorative lighting industry and have been from our humble beginnings in Kimmage in 1989. Our design and project portfolio is substantial and as a result so is our experience. Enjoy browsing our projects and products and please contact us to discuss your ideas.

Foxrock Village

Commercial Christmas

Fantasy Lights take Christmas lighting seriously! Since 1989 we have been at the cutting edge of Christmas lighting. Right from the beginning quality was of the utmost importance.

Our Commercial Christmas features are helping to create a positive vibrant atmosphere in the towns, villages and communities where they are installed.

Christmas lighting and features have the ability to transform the local area and even whole cities.

Fantasy lights specialise in providing ideas and advice to get the most out of every position and every feature.

Dun Laoghaire

Dundrum

2D Features

From off the Shelf features to bespoke designed and manufactured ones, we use one or more lighting products to create attractive, robust features that last season after season. Manufactured in Aluminium, Galvanised Steel, Stainless Steel and Mineral Fibre, these features can be mounted on Poles, Cross Street, Free-standing or on Buildings.

3D Features

Our 3D range includes off the shelf, made to order and bespoke designs. Again, we use one or more lighting products to create attractive, robust features that last from season to season. Manufactured in Aluminium, Galvanised Steel, Stainless Steel and mineral fibre, these features can be hung cross street, on poles and trees, or freestanding.

Tree Features

We have a wide range of Christmas Trees that are freestanding cone trees in various designs, shapes, sizes and colours. We also build modular trees that can be custom made to any size, shape and colour. They can also be decorated and lit using a variety of decorations and lighting products.

Cone Trees

Ballyfermot

3D Features

Blackrock Village

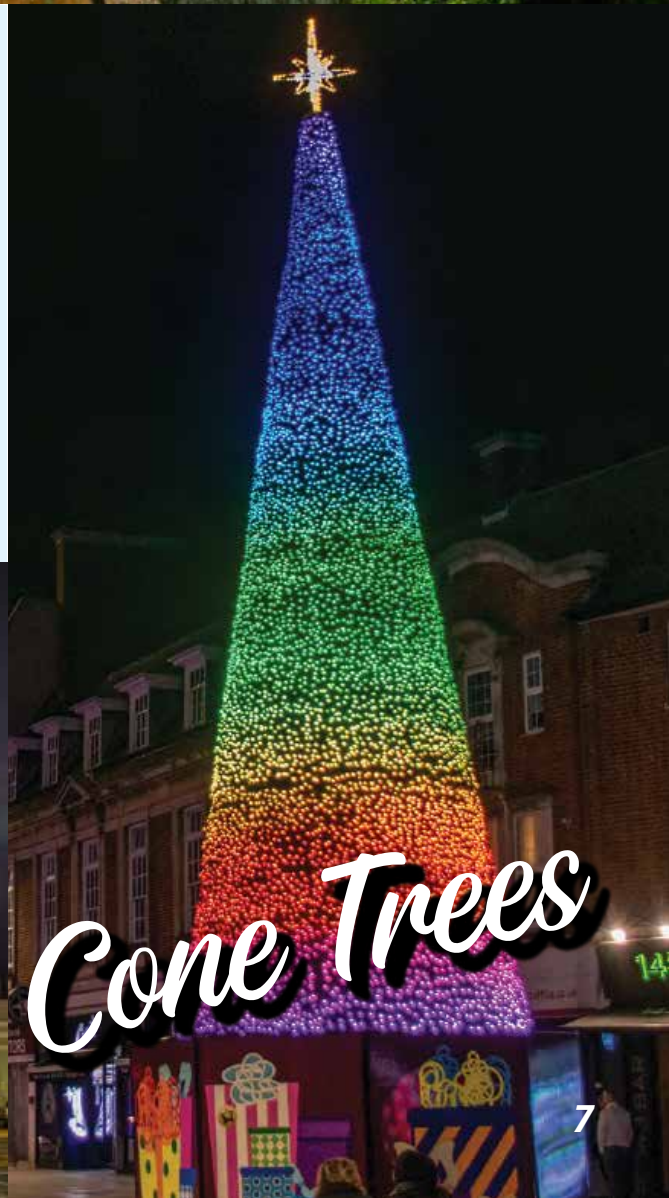

Christmas Design

Fantasy Lights provide design in three main areas, Town & City Layout, Feature & Bespoke Feature Design and Building Designs.

We provide concept ideas and proposed drawings with layouts based on your brief. The process continues to unfold discussing your ideas, positions and other requirements.

Creating Photo Opportunities as part of your Christmas and Festive display is a great way to get traction in your marketing campaigns and promote your area or company.

It's a good idea to provide some " #s " and " @s " to help in specific campaigns. It also creates a "feel good" atmosphere about the area and the organisation providing it.

Midlands Hotel, Portlaoise (formerly The Heritage)

Swags

The Dylan Hotel, Dublin

Hook & Ladder, Limerick

A classic Christmas decoration! These are quite traditional decorations that have never gone out of fashion. They look great, plain or decorated. Light them up with classic warm white, or striking ice white lights. Red and gold bows make for a really traditional look and feel.

Use coloured or multi coloured lights to create your own modern theme. You can light them up with Twinkly pro too!

Garlands.

Brooks Hotel, Dublin

New Ross, Co. Wexford

Cross Street Features

Bring your streets alive with a wide variety of Cross-Street features.

Transform dark sections into vibrant and attractive areas alternating colours and designs to create interesting skylines attracting new visitors.

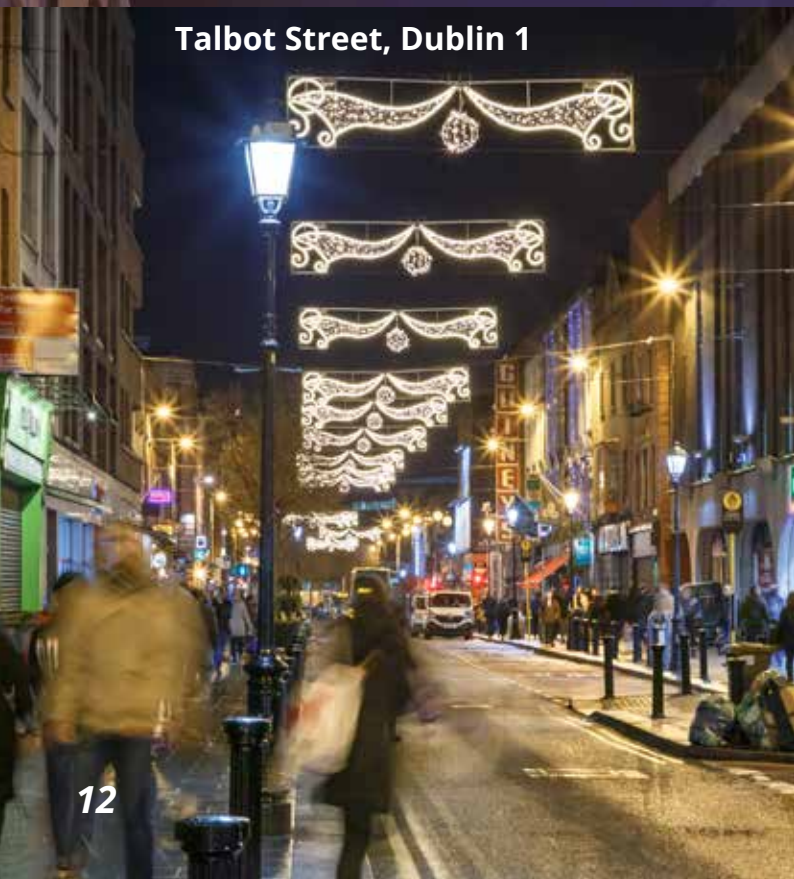

Choose from Classic designs and colours to Modern Masterpieces. And everything in between.

Use the same features to create distance and dept.

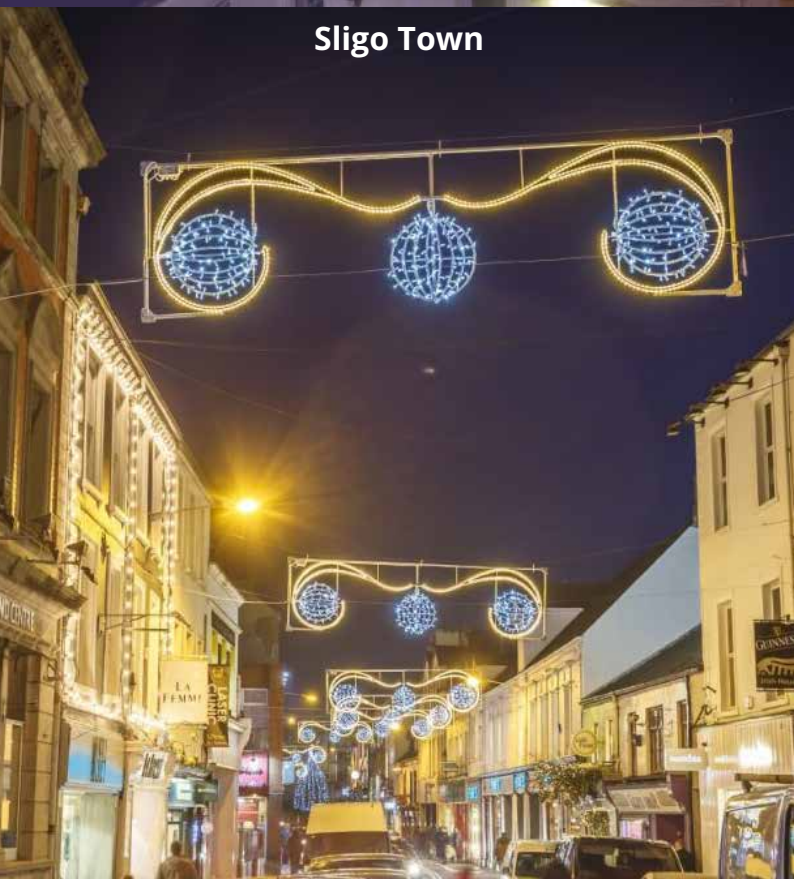

Program the features together to perform a spectacular lightshow above your pedestrian streets and roads.

Product

Twinkly Pro is a professional range of Lighting strings comprised of LEDs that can be individually mapped and controls for linking, networking, grouping and programming. This gives you amazing control over each LED. When combined with the free controls, you can easily create stunning effects with groups of LEDs and Groups of Features.

We provide the complete range of Twinkly Pro Lighting and Controllers. String Lights and Curtain Lights in different Lengths and Colours with the different extras too,

Variety of Uses

Twinkly Pro can be used to wrap Trees, Christmas Trees, Features and other objects. You can update your current Christmas Features and it can be used as a curtain light to create drapes of light on buildings and other objects. When your Twinkly Pro is in place whether it's 2D or 3D it's time to map your Twinklies!

What is mapping?

Mapping is the plotting of the position of each and every Twinkly LED in your feature on the Twinkly App. That way the app knows the position of every LED and can play the effects perfectly.

Programmable

The App can then be used to program the effects that you want to use on your display or Feature. The App comes with hundreds of Free lighting effects, some pre-installed and some you can download for free. The app allows you to create a play list of effects, determine the running time for each effect individually and set the lighting times for your Twinkly Pro to turn on and off.

Linking

Once Mapping is complete you can link other mapped Twinkly Pro Features together. They can be linked together so that you can control a group together. Example – You can have twenty five 3D features linked together. Then you can apply an effect in the Group and it applies to all twenty five features at once (Sync). You can create a playlist for the group and set the on / off times for the features and it applies to all twenty five features at the same time.

You can also link together (Join) a number of mapped features so that they act as one feature. This way the effects applied are applied to the whole group as one feature as opposed to several grouped features having the effect applied individually.

Design own Effects

Using the mobile App you can create your own effects and colour schemes based on existing effects and templates. This includes changing colours, blending colours, static and twinkling effects, colour changing, speed of effects, movement and changes.

Desktop application

You can also use the desktop application to create all these effects using the existing effects and templates or you can create them from scratch.

Transform your buildings, trees, and features with Twinkly Pro using the free App remotely from either iPhone, iPad or Desktop. Fantastic effects available in the App and you can edit and create your own.

Twinkly Professional Festoon

Naas Town, Co. Kildare

Twinkly Pro Wrapped Trees

Twinkly Pro is a range of professional programmable LED string lights. With vibrant colours and warm and ice white available in the same set the options are limitless. Using the App the lights are easily mapped on the tree to create stunning effects. Colour blending, elegant movement and special effects make this option very attractive. You can also group trees together to control the effects simultaneously or link them to create one big effect over all the trees.

Sligo Town

Sligo Town

Inchicore, Dublin 8

Wrapped Trees

Wrapping Trees in string lights has become an art perfected by Fantasy Lights. Trees are usually wrapped with our professional range of string lights. A variety of colours are available however the most popular colour remains white. We provide Warm White, Ice White and Warm White with an Ice White Flash.

Sometimes with groups of trees it looks very attractive to have alternate trees in warm white then ice white.

Living Trees

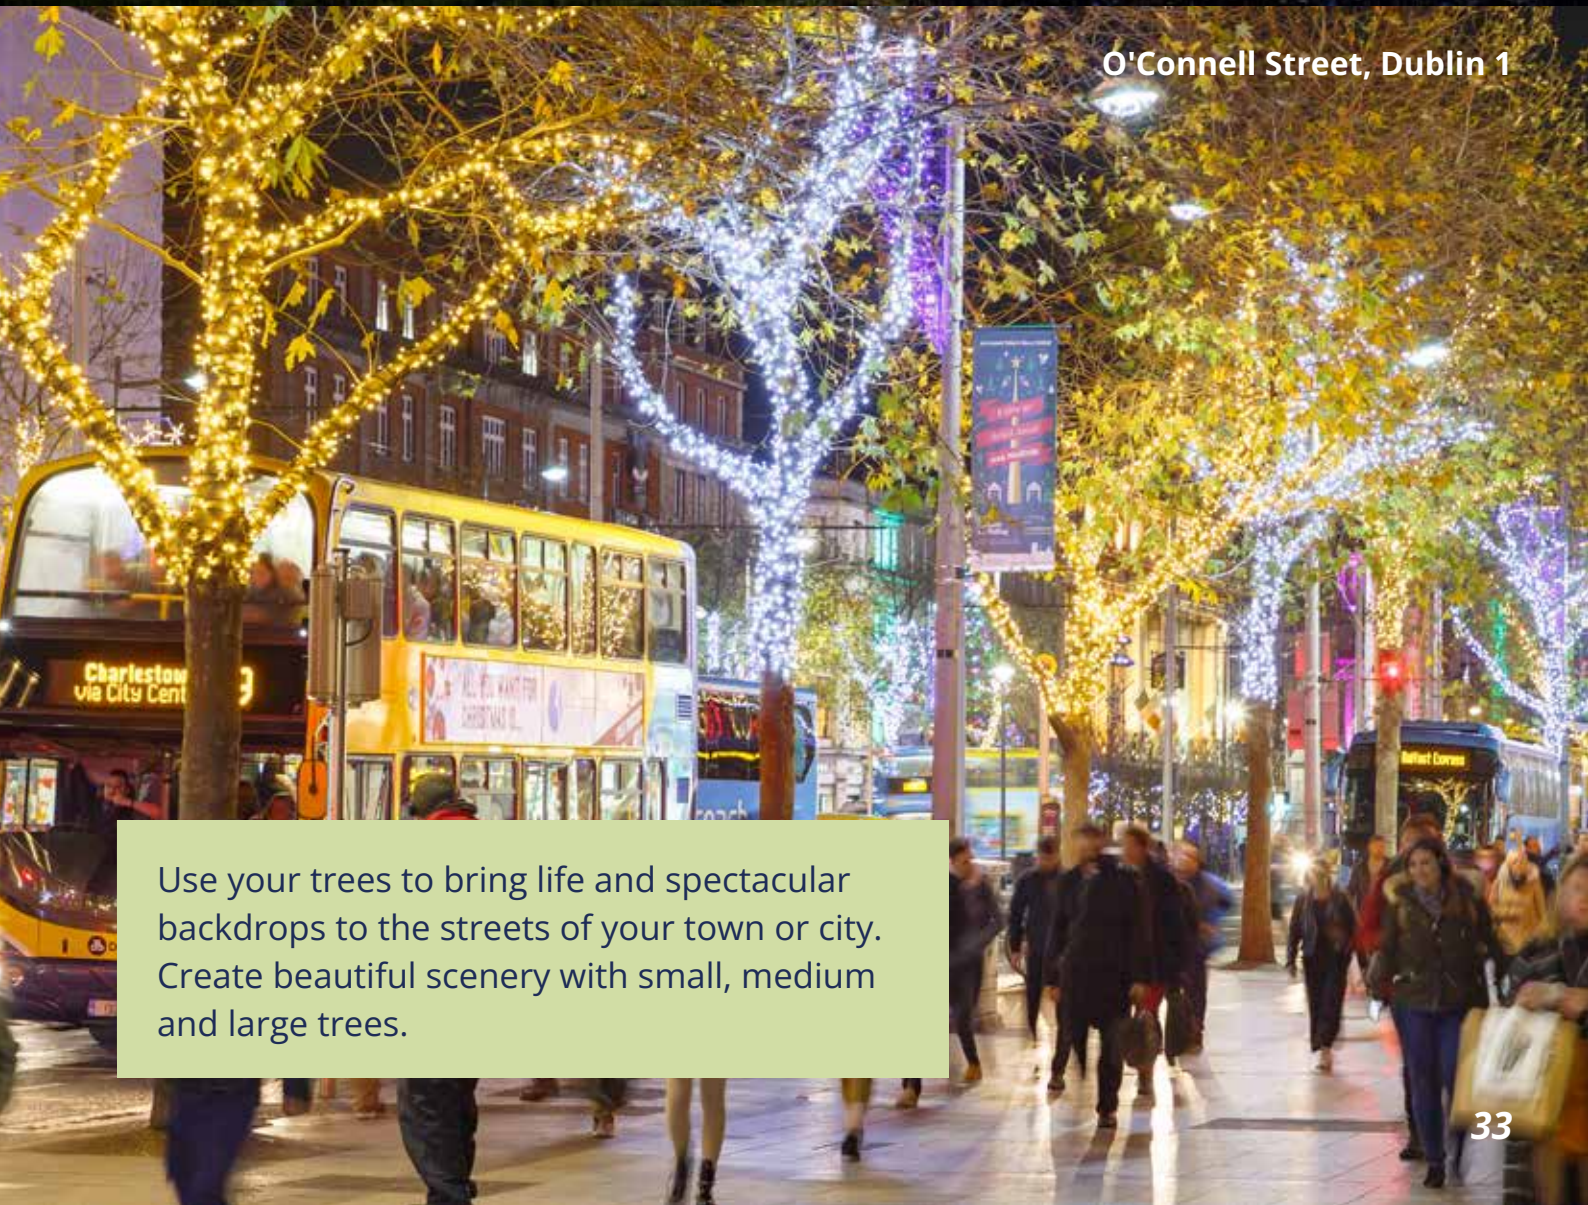

Dublin Castle, Dublin 2

Sligo Town

Carrick on Shannon

O'Connell Street, Dublin 1

Use your trees to bring life and spectacular backdrops to the streets of your town or city. Create beautiful scenery with small, medium and large trees.

Gobo Projectors

Transform your building completely into a canvas for your art, product or advertising, in fact anything you want. Every season, every festival, every promotion, covered. Or you can enhance your buildings features, and even add features it doesn't have! Decorate your building for every event or if your buildings are being refurbished you can project onto the hoarding.

Design Service

Bright, Colourful uncluttered images really stand out on your buildings.

We provide a design service with visual mock-ups of your designs or we can design the projections for you based on the brief you provide.

Safety Signage

Safety Signage

Using Gobo projectors has become very popular for temporary and permanent signage. Often used in manufacturing plants with vehicular machinery and production plants, the signs don't get worn out with constant pedestrian and vehicle traffic nor from harsh or abrasive cleaning and chemicals. They are suitable for Way-finding, Instructions, Safety and informational signage. They can also be sensor activated to increase recognition.

The projection of safety signs is a very effective and economic solution available in the market. Safety projections work very well in low visibility conditions. They are flexible and environmentally friendly.

AI-powered safety systems

Fantasy Lights can now provide safety devices for forklifts using AI-powered software for optimising warehouse safety operations, which can be implemented with projectors, robotics and artificial intelligence to improve the efficiency and safety of your warehouse and material handling fleet.

Other products include AI-powered anti-collision devices and projectors, data analysis to identify high-risk areas, sensors for safety support and zone detection, cloud-based management software and much more.

Reduce Reuse Recycle

We are registered with WEEE Ireland and responsibly dispose of all WEEE waste at their end of life. We also work with Rehab and Keywaste to manage our day-to-day waste to ensure all waste is minimized and recyclable waste is recycled through authorised plants.

We maintain an ISO 9001:2015 Quality Management System which is certified and audited by the NSAI on an annual basis. This ensures our processes and systems meet the demands of the modern day customer.

During day to day operations we reduce waste by re-using packaging and recycling all our bulbs and cables. In all our Festive installations we re-use all cables, catenary wires, fixings and junction boxes.

As part of our installation service we remove all related rubbish, packaging, older fittings and as a WEEE Registered producer we recycle the packaging, bulbs and older fittings.
